

Dear Mike,

As a self-taught programmer with a background in game development and a diploma in web design and development from Yoobee College of Creative Innovation, I am excited to apply for a software developer internship at Smarte. With my skills in programming languages and frameworks such as C#, Unity, HTML/CSS, JavaScript, Vue, jQuery, PHP, Laravel, and Python, I am confident that I can contribute to your team and help tackle clients' biggest challenges.

Most recently, I have been working on personal projects that have allowed me to develop my skills in programming and game development. I have worked in a team to create a 3d PC game using C# and Unity that was submitted to GitHub Gameoff, and I have also developed an Android and WebGL match 3-style game on my own. These projects have given me experience working in a team as well as independently, and have allowed me to apply my problem-solving and creative thinking skills in a practical context.

In addition to my game development experience, I have gained valuable skills through my part-time job at Countdown, where I have maintained perpetual inventory, performed stock takes, printed tickets, marked down products, and submitted incident reports. I have also participated in emerging leaders training programs, acted as a supervisor, and worked in a team to maintain store operations.

I am excited about the opportunity to join Smarte and work in a diverse and cutting-edge environment. As for my availability, I am able to work for free on Wednesdays, Thursdays, Fridays, and Saturdays all day. Alternatively, if the position is paid, then I am available to work Monday to Friday with two weeks notice. Thank you for considering my application.

Cheers,

Mark
